

ACG's Dupac® films are manufactured in a high tech manufacturing facility. Our unique drying and coating technology produces highly flexible films that will run smoothly even on high speed blister-forming lines. Dupac's two-layer structure (PVC film coated with high-performance PVdC) provides medium to high barrier protection.

Key features

- / Varied PVC thicknesses and PVdC coatings available
- / A moderate to high barrier against moisture and oxygen
- / Available in a wide range of colours

Technical specifications

Structures
PVC / PVdC

PVC: standard thickness is 250µm (200µm – 400µm available)

PVdC: available in 40, 60, 80, 90 and 120gsm

We can help with customised structures.
